Below is a clipping of your book review that appeared in the January 09 issue of the *Sacramento Book Review*. Thank you for sending us the book.

The Complete Idiot's Guide to Creating a Website

By Paul McFedries

Alpha Books, \$24.95, 384 pages

For a *Complete Idiot's Guide*, *Creating a Website* is one step above in technical requirements. McFedries provides the tools and instructions on most phases of web development and construction, but you need to have some basic understanding of computers if not programming. His lessons on HTML are clear and easy to follow, but for someone without any experience at all, it could leave them glassy-eyed. However, the instruction and tools on the CD are good enough that most anyone could take them step-by-step and create a usable website of their own. The CD also has a wealth of useful information and templates for creating your own site, and with the book (and some concentration) will let you customize them. Recommended, but with the caveat that it isn't a book for the absolute beginner or someone looking for a quick fix.
